

AVOID APP SPRAWL

Shadow IT

Giving users access to low code/no code tools can end up creating a "Shadow IT" environment.

Bad Designs Faster

Many apps can quickly be developed and deployed, but as someone once said, "low-code/no-code is just a way to do bad designs faster."

Popping Up Like Mushrooms

Due to the ease of creating simple apps – and the creative fun in it, apps start popping up like mushrooms after the rain. Not a bad thing, but needs to be controlled in a business.

How Do I Avoid App Sprawl?

- CONTROL WHO HAS RIGHTS TO CREATE APPS
- DEFINE PROCESSES FOR DEVELOPING AND DEPLOYING APPS
- COORDINATE THE APP DEVELOPMENT OF DIFFERENT DEPARTMENTS
- WHO CAN DOWNLOAD APPS
- SET PERMISSIONS AND ACCESS RIGHTS TO APPS
- ALLOCATE COMPANY RESOURCES EFFICIENTLY

Got Sprawl?

Crow Canyon can help consolidate your apps into one system for an organized, efficient workflow
